

Verifim FIM

Real-time file integrity monitoring and alerting.

OVERVIEW

Real-time file integrity monitoring that detects unauthorized change to files, configurations and systems — with tamper alerts and compliance-grade audit evidence for your SOC.

KEY CAPABILITIES

- **Real-time monitoring**
Files, folders, configurations and registry keys, continuously.
- **Change detection**
Who changed what and when, with before / after detail.
- **Tamper & anomaly alerts**
Instant notification of unauthorized or unexpected change.
- **Baseline & policy**
Trusted baselines with allow-listed, expected changes.
- **Compliance audit trail**
Audit-grade evidence and reporting for regulators.
- **SIEM integration**
Forward integrity events straight to your SOC.
